

DevOps Onboarding

Business Requirement

Devops rollout and onboarding is key part of continuous delivery and integration and improved supportability. Today every enterprise is trying to improve technology operational standard continuous uplifting operational scorecard.

Tecfusion has consultants who are working in markets leading DevOps tool like Chef, Udeploy, Kubernetes and Environment Build containerization and quick upscaling like Docker, Openshisht.

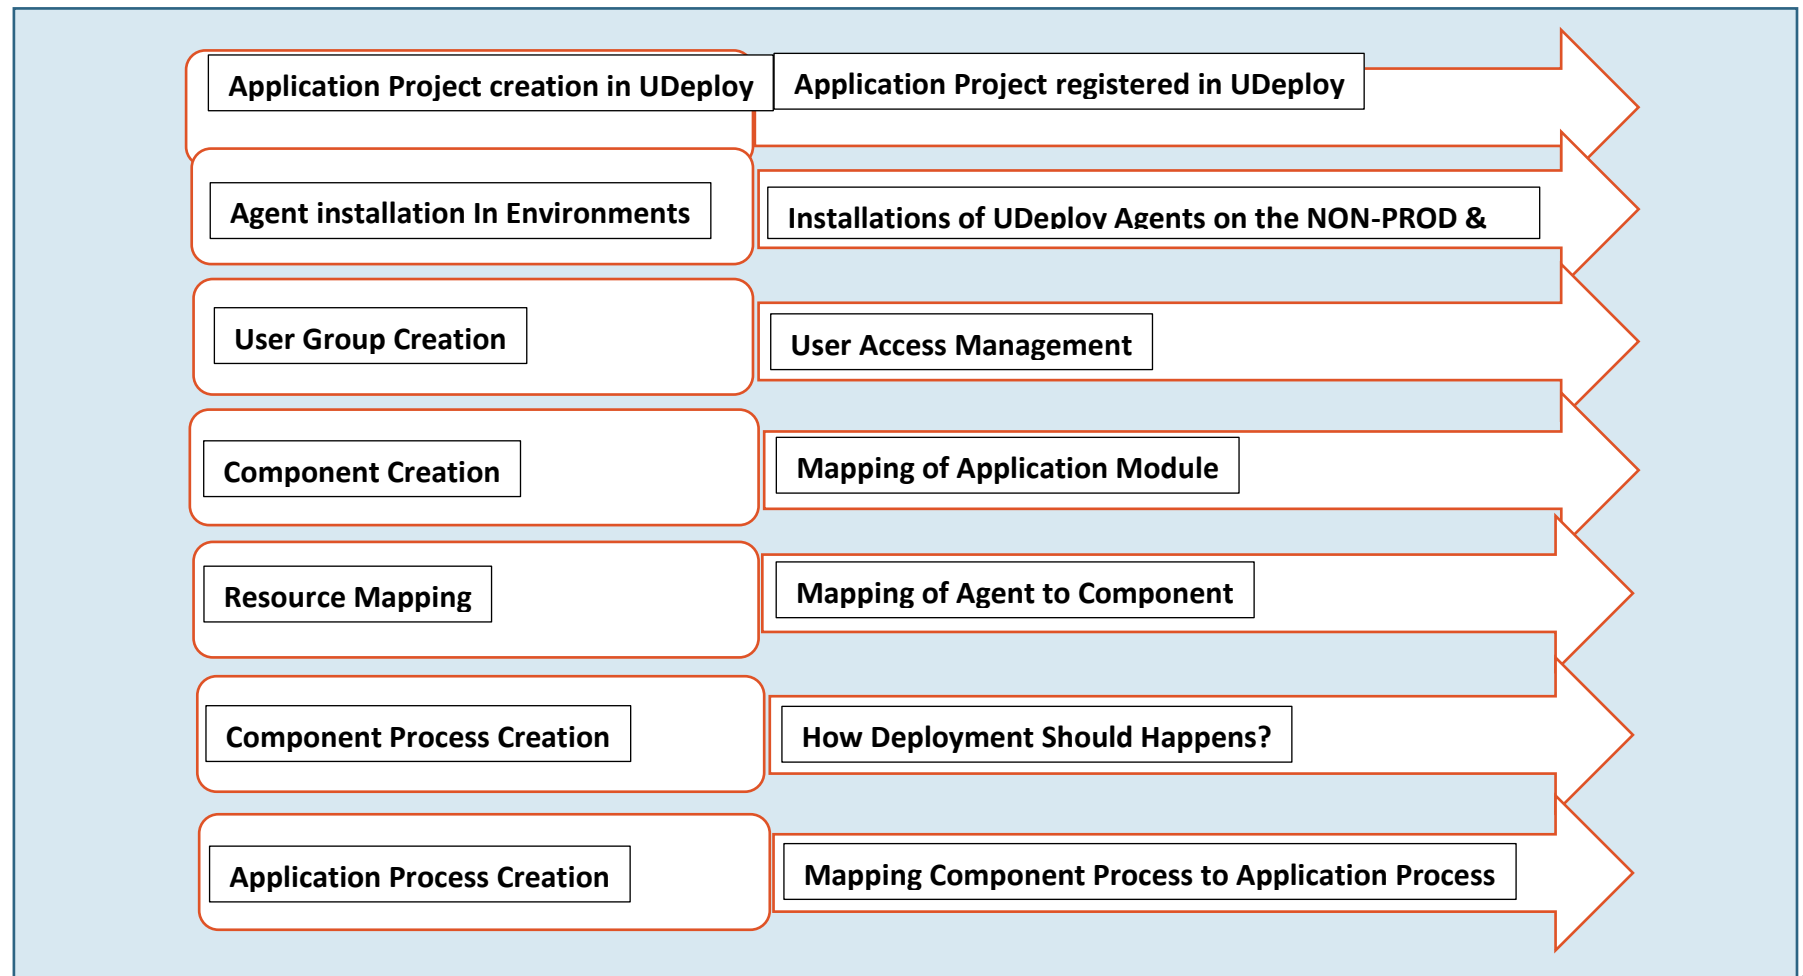

As a part of Devops Rollout in one of our financial services client we successfully achieved using Udeploy for Middleware Deployment and Chef for Infrastructure patching. As application been built over few years initial on boarding assessment of application was critical and Udeploy been chosen as it was covering 98% of application deployment automation without much customizing.

How it's benefited the Organization

- Build upon a robust and mature RESTFUL API
- Designed to integrate with other tools
- Automated reduce scope of human error
- Faster server provisioning
- Consistency across all servers
- Increase speed scalability and efficiency
- Versioned Infrastructure
